Plant Hormones: Biosynthesis, Signal Transduction, Action! Peter J., Davies P. J in Books, Magazines, Textbooks | eBay

Plant hormones play a crucial role in controlling the way in which plants grow and develop. While metabolism provides the power and building blocks for plant life, it

Signal transduction occurs when an extracellular signaling molecule activates a specific receptor located on the cell surface or inside the cell. In turn, this it results in the activation of a signal transduction The rate of hormone biosynthesis and secretion is often regulated Plant hormones include

their precise roles in sugar signal transduction pathways components in plant hormone biosynthesis and signal transduction
