Galaxies form and evolve within an expanding and cooling universe. Because light takes billions of years to cross the cosmos, we see distant galaxies as they were at

I don't find an evolving universe and a belief in a higher intelligence (or god, if you like) to be in conflict. There is a contradiction at the heart of creation.

Nov 06, 2014 How did we get here? How did we get here? In order to understand how the universe has changed from its initial simple state following the Big Bang (only

As the universe expanded, astronomers will be able to reconstruct the evolution of structure in the universe over the last 10 to 15 billion years.

While the mechanisms of evolution are still under investigation, scientists universally accept that the cosmos, our planet, and life evolved and continue to evolve.

When in the Universe's time line did the first galaxies form? How have gas, stars and galaxies subsequently evolved over cosmic time? These are two core questions
